Short description (max. signs 1100)

Our products are made from various mineral-based materials that have one thing in common: they meet high standards for quality, appearance, and functionality. Basically, limestone and special resin are mixed, poured into shape using a mold, then cured and finished. The result feels solid and stone-like, yet warm to the touch. For all our mineral materials: They meet all the requirements for public, commercial, and private bathroom areas. The consistently homogeneous, non-porous material is dirt-repellent and easy to care for, stain-resistant, and resistant to commonly used cleaning and care products. Mineral materials are durable and sustainable. Repairs or refinishing are still possible even after years.
