Short description (max. signs 1100)

Powerful, aesthetic and durable - all these features characterise a Lechner ceramic worktop! Made of quartz, porcelain clay, feldspar and ton, this material opens up completely new design possibilities in kitchens. The so-called silicate raw materials are fused together in a firing process and form a material that could hardly be more versatile. The result is a resistant and durable ceramic worktop that meets the highest quality standards. Worktops and backsplashes in various material thicknesses can be made from this high-quality material. An expressive representative of the Industrial Look is the Metal dark decor. It skilfully picks up on the theme of cold-rolled steel and captivates with exciting shades of blue, corroded areas and a fascinating play of colours.
