open end

Product life cycle in the CNW

Short description (max. signs 1100)

With its lightweight appearance, this healthy wallcovering brings freshness and naturalness to your walls. After wallpapering and painting, the fine texture of this woodchip wallpaper has a decisive influence on the over impression of your home – even after it has been re-painted several times.

The product scores not only with very good processing properties, but also with real, long-term added value for customers: The fact that the wallpaper can be painted over several times means that it can be used for many years and is therefore sustainable. Another plus point is its composition: the wall covering consists of paper, wood and textile fibres and is free of PVC and plasticisers; it is also open to diffusion and regulates moisture. The combination of these factors makes Vlies-Rauhfaser 20 | Vlies-Rauhfaser Viva the optimal wallpaper for a healthy home and an economically valuable building material.

2 | PRODUCT DETAILS

51 (wallpaper) | Wall covering to be painted over
