Product life cycle in the CNW

### Short description (max. signs 1100)

With INDEWO®, europac implements its passion for aesthetically and technically sophisticated materials. Here the naturalness, haptics and warmth of precious wood are combined with the almost endless design possibilities of digital printing. This opens up a multifaceted design potential that has so far been reserved only to the tile and wallpaper industry. Traditional ornaments and wood merge with the help of the latest technology to create an unprecedented material, including fire protection property. The concept of sustainability is not lost from sight in the course of this.
